Music Technology Enrichment

This practical Music Technology course gives students the opportunity to develop their skills in audio production, sound design and music creation using Cubase.

We meet once a week, exploring a range of techniques, from setting up microphones and recording live instruments and vocals to writing original music and putting together complete tracks.

As this is an enrichment lesson rather than a formal qualification, there's no pressure to achieve a particular grade or outcome. Instead, students have the freedom to experiment, learn new skills and develop their own ideas using professional music software.

It's a chance to spend time making music, trying things out and enjoying the creative process.
